MANAGER, QUALITY ASSURANCE | RELEASE READINESS | QUALITY GOVERNANCE | REGULATORY AI SAAS

PROFESSIONAL SUMMARY

- Quality Assurance leader with 14+ years across regulated fintech, healthcare, SaaS, edtech, and enterprise platforms, including 6+ years leading QA teams and quality management.
- Builds scalable QA operations: release readiness, quality KPIs, defect severity models, risk-based regression, test environment strategy, CI/CD checks, and evidence standards.
- Known for partnering with Engineering, Product, Customer, Infra, and Compliance leaders to turn quality signals into clear release decisions, stronger accountability, and fewer customer-impacting defects.

QUALITY OPERATIONS

- **Release readiness policy:** production-ready criteria, risk gates, go/no-go evidence, sign-off standards, rollback controls, and production support signals.
- **Quality metrics and reporting:** escaped defects, defect age, time-to-triage, reopen trends, execution health, flaky-test rate, coverage, and release confidence.
- **Defect triage and severity:** standardized severity definitions, escalation paths, blocker rules, ownership expectations, and corrective-action feedback loops.
- **Regression and environment strategy:** risk-based coverage, CI/CD smoke integration, test data controls, environment parity, and reliability signal review.
- **Quality evidence standards:** test results, logs, screenshots, Automation, CICD integration, RCA records, release notes, and compliance-ready documentation for auditable decisions.

CORE COMPETENCIES

QA Strategy & Automation | Release Readiness | Quality Metrics & Dashboards | Defect Triage & Severity Frameworks | Risk-Based Regression Strategy | Test Environment Strategy

Quality Standards | CI/CD Quality | Automation Architecture | Incident RCA & Prevention | Cross-Functional Quality | AI / Regulated Workflow QA

Compliance & Audit Readiness | Test Data Management | Environment Parity | Reliability | People Leadership | Vendor / Offshore Management | Agile Delivery

TOOLS & TECHNOLOGIES

Automation & API: Cypress, Selenium/WebDriver, WebdriverIO, Appium, Postman, Swagger/OpenAPI, SOAP UI, Charles Proxy, AI-assisted test creation

CI/CD & DevOps: GitHub Actions, CircleCI, Jenkins, Azure DevOps, Docker, Kubernetes; smoke suites, rollback criteria, DB migrations

Test, Defect & Observability: Jira, Zephyr, Xray, TestRail, Datadog, Splunk, New Relic, Sentry, SQL/MySQL; dashboards and quality scorecards

PROFESSIONAL EXPERIENCE

Hire'in Solutions - Product Engineering Manager, Quality & Release

Feb 2023 - Present | Hybrid | Abbott Lingo, klerIQ AI, proKred.com

- Own release quality strategy for regulated mobile and device-integrated CGM experiences, aligning readiness gates with FDA QSR / ISO-informed evidence, risk thresholds, and sign-off criteria.
- Built release readiness policy across smoke/regression results, defect aging, environment health, rollback criteria, and production-support signals, reducing deployment cycle time by ~25%.
- Established quality scorecards for escaped defects, execution of health, defect aging, reopen trends, automation signal quality, and release confidence to improve leadership visibility.
- Standardized defect severity and triage ownership across Product, Engineering, QA, and Customer-facing stakeholders, improving resolution throughput ~20%.
- Defined risk-based regression model combining automated smoke/API checks, manual exploratory scope, test data controls, and observability review for high-risk release areas.
- Partnered on healthcare AI and credentialing workflow initiatives covering secure intake, structured data validation, document/PDF packet quality, and audit-ready evidence.

Mathison - Head of QA & Program

Jan 2022 - Jan 2023 | Startup SaaS / AI-Assisted DEI Platform

- Built the QA function from zero by defining test strategy, release strategy, triage cadence, QA documentation, CI/CD checks, and quality ownership across Engineering and Product.

- Scaled regression automation to ~90% coverage and embedded smoke/API validation into CI/CD, improving feature rollout speed by ~30% and reducing last-minute release blockers.
- Created defect severity framework, RCA templates, and corrective-action loops that reduced average defect resolution time by ~25%.
- Implemented GenAI-assisted test authoring and risk-based prioritization to expand coverage without slowing a high-growth SaaS roadmap.
- Managed QA hiring, sprint alignment, and quality intake with PMs/EMs so quality debt, release risk, and customer issues were prioritized alongside roadmap work.

Edmodo - Senior Manager, QA & Program

Jul 2019 - Jan 2022 | Global SaaS / EdTech

- Led a 25-member onshore/offshore QA organization across web, API, mobile, and platform releases serving large-scale global education users.
- Defined release validation strategy across branching, pre-merge gates, RC smoke checks, and production readiness reviews, reducing rollbacks by ~95%.
- Scaled regression automation to ~85% coverage across web/API surfaces while improving reliability signals, flaky-test handling, and release confidence.
- Built quality dashboards for defect density, execution health, automation ROI, release risk, and SLA adherence, improving release stability by ~30%.
- Owned vendor governance, capacity planning, and QA operating rhythm, improving throughput while maintaining accountability across distributed teams.
- Partnered with Product, Engineering, Infra, and Support to connect customer-reported issues to backlog prioritization, RCA, and prevention controls.

Prior Experience - Senior QA Engineer / QA Lead

Wells Fargo | First Republic Bank | Walmart Labs | McKesson | American Airlines | Fintech, Healthcare, Retail, Travel

- Led end-to-end quality for enterprise platforms including payment systems, mobile wallet features, API workflows, clinical documentation, and high-traffic customer applications.
- Supported release quality for AI-enabled oncology clinical documentation workflows at McKesson, validating structured data, secure documents, audit evidence, and workflow reliability.
- Led QA for Wells Fargo Wallet and digital banking payment workflows, strengthening mobile/API regression, integration coverage, and production readiness for high-volume fintech users.
- Validated regulated healthcare workflows at McKesson, including structured clinical data, secure documentation flows, audit evidence, and high-reliability release controls.
- Supported American Airlines and Walmart Labs customer-facing releases with cross-platform validation, service integration testing, and defect governance under tight launch timelines.
- Designed API and microservices test strategies with DevOps-integrated automation to support frequent releases with stronger pre-production risk detection.
- Improved defect lifecycle reporting and triage discipline across distributed teams, accelerating issue closure ~20% and reducing downstream release ambiguity.

EDUCATION & CERTIFICATIONS

B.E., Computer Science & Engineering - MSRIT, Bengaluru, India

Executive Education: Product Management & Strategy - Wharton Executive Education, 2024

Professional Scrum Master II (PSM II) - Scrum.org

ISTQB Certified Tester Advanced Level (Test Management) – bcs.org
